Summary

Results-driven Full Stack Engineer (FAST NUCES, 2026) with 12+ months of production experience across three software houses delivering scalable MERN-stack web apps, high-performance RESTful APIs, and real-time event-driven systems. Proficient in React.js, Next.js, Node.js, TypeScript, and PostgreSQL with a strong focus on performance optimization, CI/CD automation, and microservices architecture. Adept at Agile/Scrum, test-driven development, and cloud deployments on AWS and GCP. Seeking a Full Stack / Backend Engineer role to ship production-grade, high-impact software at scale.

Technical Skills

Frontend: React.js, Next.js, Angular, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Redux, REST API integration

Backend: Node.js, Express.js, NestJS, ASP.NET Core, FastAPI, Go, RESTful APIs, GraphQL, WebSockets, Microservices, JWT Authentication

Databases: PostgreSQL, MongoDB, MySQL, Supabase, Firebase, Redis **Real-time:** Socket.io, WebSockets, Event-Driven Architecture

Languages: JavaScript, TypeScript, Python, Java, C#, C++, SQL **Testing:** Jest, Mocha, JUnit, TDD, SonarQube, Integration Testing

Cloud & DevOps: AWS (EC2, S3, Lambda), GCP, Azure, Docker, Jenkins, Vercel, GitHub Actions, CI/CD Pipelines, Git Flow

Practices: Agile, Scrum, Sprint Planning, System Design, Scalable Architecture, Peer Code Review, Microservices

Education

FAST National University of Computing and Emerging Sciences Aug 2022 – June 2026

Bachelor of Science in Software Engineering *Coursework: Data Structures & Algorithms, Database Systems, Software Architecture, Operating Systems, Computer Networks*

Experience

Full Stack Engineer App Minds Software House Jun 2025 – Aug 2025

- Architected and shipped 5+ full-stack features in React.js and Node.js, reducing frontend load time by **30%** via code splitting, lazy loading, and bundle optimization; implemented reusable TypeScript component library cutting UI dev time by **20%**
- Designed RESTful APIs consumed by 3 client-facing web apps, improving data retrieval latency by **25%** via response caching and query optimization; resolved 20+ critical production bugs across the MERN stack
- Collaborated in a 6-person Agile team using Git Flow, PR reviews, and sprint planning; maintained **95%+** sprint velocity across all milestones

Backend Developer Nexium Software House (Remote) Jun 2025 – Aug 2025

- Developed and maintained **10+ RESTful API endpoints** in Node.js and Express.js supporting high-availability workflows for multiple production clients
- Optimized PostgreSQL queries via composite indexing, query restructuring, and connection pooling, reducing execution time by **40%** and enabling **3×** higher concurrent load
- Implemented JWT authentication middleware and RBAC, hardening API security; authored Jest unit and integration tests achieving **80%+** coverage; integrated into CI/CD via Jenkins

AI Engineer Zevenz Oct 2025 – Mar 2026

- Built and deployed 3 production LLM-integrated AI workflows using Python and FastAPI, exposing versioned REST endpoints to client applications; applied chain-of-thought and few-shot prompt engineering achieving **35%** accuracy improvement
- Automated multi-step data pipelines with n8n, eliminating **8+ hrs/week** of manual operations; took full ownership of backend API design and deployment within a 3-person startup team

Projects

Stratify – AI Powered Trading SaaS Next.js, Node.js, Express.js, MongoDB, Python, Gemini Flash API, MetaTrader GitHub

- Built full MEAN-stack SaaS from scratch; integrated Gemini Flash API with custom prompt pipelines parsing natural language into structured JSON trading logic at **90%+** accuracy; deployed backtesting engine on 2+ years of historical market data
- Implemented JWT auth, RBAC, and rate limiting; deployed on GCP with environment-based CI/CD configuration

Zevenz Builders Marketplace React.js, Node.js, Express.js, MongoDB, Socket.io, Nodemailer GitHub

- Built end-to-end MERN marketplace with project bidding, proposal management, and contractor verification; Socket.io real-time messaging at **sub-200ms latency**; automated **100+ daily** transactional emails via Nodemailer

Blockchain Attendance Management System Custom Blockchain, SHA-256, Proof-of-Work GitHub

- Built full-stack blockchain storing **500+ records** immutably via custom SHA-256 hashing and Proof-of-Work (no third-party libs); O(n) chain validation with tamper-proof integrity; REST API with RBAC for record queries

Generative AI Voice Cloning Pipeline OpenVoice V2, FastAPI, Python, n8n GitHub

- Deployed generative AI pipeline as versioned FastAPI REST endpoint for zero-shot voice synthesis; n8n automation reduced manual steps by **70%**; Docker-based horizontal scalability for concurrent requests

Arabic Text Editor Java, JFrame, Spring Boot, JUnit, Abstract Factory, DAO GitHub

- Built Java desktop app using three-layered architecture with Abstract Factory and DAO patterns; **85%+** JUnit coverage across all service and repository layers
